HIGH QUALITY RENOVATION SYSTEM FOR CONCRETE & FACADES

WATER-BASED

1 COMPONENT

WIDE VARIETY OF COLOURS

RD-ELASTOFLEX

Low VOC elastomeric waterproofing coating high elasticity – crack-bridging – vapor permeability

- Prevents further cracking, flaking and bulging
- Naterproof and vapor permeable film is breathable and building stays dry inside
- Solution with moisture regulation that prevents internal condensation ISO 7783:2018
- High resistance against CO2 diffusion and weathering
- Protects against chlorides, carbonation and rusting of steel reinforcement
- CE class 2 certification according to EN 1504-2

RD-Elastoflex is highly recommended as a waterproofing and protection coating for the renovation of walls, façades and structures made of concrete or bricks. It prevents the penetration of moisture and carbon dioxide and blocks the acceleration of corrosion of the reinforcing steel inside the concrete.

The specific formulation enables to combine different functionalities including high dirt pick-up resistance, good resistance against pollution and a nice aesthetical finish.

Crack bridging

Permanent elasticity

Life expectancy

Dirt pick resistance

Anti-carbonation

RD-ELASTOFLEX QUARTZ

Elastomeric waterproofing coating with textured effect

- Special version of RD-Elastoflex.
- Masks irregularities and surface damage.
- Waterproof and vapour permeable - the building breathes and stays dry.
- Very good weather resistance.
- Can be applied to old or new walls, cement, bricks, concrete, etc.

RD-UNIFIX

Transparent impregnation primer for porous and powdery substrates

- Single-component and waterborne.
- Excellent fixing properties on powdering surfaces.
- Increases the yield of RD-Elastoflex system in the case of porous substrates.
- No VOCs

HIGH QUALITY RENOVATION SYSTEM FOR CONCRETE & FACADES

USING THE MESH

RD-MUR FLEECE

In case of active cracks in the substrates, it is recommended to use the reinforcement mesh **RD-Mur Fleece**.

The mesh is applied directly on the surface after repairs. The first coat of **RD-Elastoflex** is applied on top to virtually glue the mesh to the surface.

RD-Mur Fleece is micro-perforated and used to reinforce waterproofing systems and ensure the durability of the film. It reinforces the crack bridging abilities and will protect weaker parts from water ingress.

RD-Mur Fleece is available in different sizes to better fit the needs.

WATER-BASED

2 COMPONENTS

WIDE VARIETY OF COLOURS

PROTECTION AGAINST GRAFFITI

RD-HYDROGRAFF HP

When there are risks of graffiti, applying a finish coat of **RD-Hydrograff HP** will help to keep the walls easy to clean. The very dense and resistant film avoids the penetration of the graffiti that remains on the surface, making it easier to clean and to remove by means of high-pressure washing and detergents.

RD-Hydrograff HP is a two-component water-based polyurethane varnish that is extremely resistant to abrasion and chemical spills. After application, it forms a flexible, highly sealed film that is mechanically and chemically very resistant. **RD-Hydrograff HP** is available as a transparent varnish or in colour, with different gloss levels from matt or satin to high gloss.

Recommended quantities and thicknesses

Unpainted surfaces according to spec. EN 1504-2		Dry film thickness in microns / mils	Consumption per m ² / ft ² per gallon	Comments
Impregnation	RD-Unifix		0,10 L / 400	quantity of RD-Unifix will depend on porosity
Primer	RD-Elastoflex	155 / 6	0,40 Kg / 157	
Finish	RD-Elastoflex	155 / 6	0,40 Kg / 157	
	TOTAL	310 / 12	0,80 Kg / 78	

Save time! Depending on the porosity of the substrate, it is possible to replace the impregnation coat of RD-Unifix by applying directly the first coat of RD-Elastoflex diluted by approx. 10% with water!

On non-powdering existing paint - aesthetical fresh-up: The number of coats is directly depending on the orientation of the wall. If the wall is often facing pouring rain, it is advised to apply, all in all, 2 coats of RD-Elastoflex. For other walls, 1 coat is enough. If the paint is powdering, apply a first coat of RD-Unifix. Repair cracks beforehand!

Smooth concrete surfaces: Apply a first coat of RD-Elastodeck diluted by aprox. 25% with water or RD-Multiprim. Always remove the curing agent from concrete prior to application!

Anti-graffiti/chemical spills/decontaminable finish: Apply one or two coats of RD-Hydrograff HP on the painted or unpainted surface.
