Protective & Marine Coatings

Aerospace

Performance coatings for tough environments.

We have worked with major civil airports and the Armed Forces for over 30 years, providing a wide range of flooring finishes which help aerospace organisations meet the demands of high traffic areas and strict health and safety regulations. Aircraft hangars, baggage halls, plant rooms, cargo terminals, aircraft maintenance and storage areas have all benefited from a range of floor and wall coatings which have proven resistance to engineering lubricants including Skydrol and Hyjet.

Best sellers in this industry include Resutile, a solvent based chemical resistant coating, Resutop LV, a highly chemical resistant, solvent free, high build coating and Resucoat HB, an extremely durable, hard wearing flooring suitable for a wide range of environments.

Automotive Floor finishes which are easy to clean and safe underfoot.

Our floor and wall coatings are used in all types of automotive environments, from busy workshops and heavy duty production lines to high end showrooms. Workshops are increasingly switching from traditional paint solutions to resin systems which need hard wearing, chemical resistant, anti-slip floors which are easy-to-clean and maintain. Oil and chemical spillages are quickly removed from a hard, seamless floor, enhancing high standards of cleanliness.

For showrooms, equally hard wearing, easy-to-clean flooring is required and this can be decorative, with company logos included.

Best sellers for the automotive sector include Resuflor VF, a self smoothing epoxy flooring system, which is easy-to-clean and aesthetically pleasing, and Resucoat™ HB, an extremely robust flooring solution with high chemical resistance to oils and lubricants.

Custodial and prisons

High levels of impact resistance provide added security.

We produce a range of resin based systems for both walls and floors in prisons and other secure environments. They provide hard wearing, durable and seamless finishes for cells, corridors, kitchens, showers and bathrooms that are easy-to-clean and maintain. High levels of impact resistance provide added security and anti-graffiti solutions to help maintain appearance and hygiene.

Best sellers include Resucrete, a screed system that possesses good chemical resistance, high compressive and flexural strengths and very high impact resistance and Decora MS, a decorative epoxy resin floor screed incorporating multi-coloured aggregates, producing an attractive, yet hard wearing and impervious sealed surface.

Education

Top marks for durable, decorative and easy clean resin.

We produce a range of resin systems suitable for all types of education facilities from nursery schools to higher education colleges, classrooms, corridors, workshops, staircases, bathrooms and kitchens.

By producing a tough finish, we can deliver high levels of durability which makes a resin floor longer lasting and more cost effective than other systems.

We see continued interest in resin as an alternative to traditional vinyl and tile floors, mainly because of the seamless monolithic finish, but also due to the range of decorative finishes available and the ease of cleaning and maintenance.

Food and beverage

Premium hygiene and efficiency solutions make us the number one choice in this market.

We know that in today's international food and beverage sector, companies need to be confident that floor and wall systems deliver the necessary long term compliance in hygiene and production efficiency.

That's why we have developed our bespoke range of resin systems especially for dry or wet food production and preparation environments. Designed to be hard wearing and slip resistant, this range is fundamental to standard decontamination and maintenance processes.

Industrial

Solutions for the most demanding production and distribution environments.

We know that modern industrial flooring for warehouses and similar environments requires the highest standards of floor and wall finishes. That's what we specialise in.

With an extensive range of seamless resin floor and wall finishes we understand what it takes to meet the day-to-day demands of production, warehouse and distribution areas and improve compliance with health, safety and hygiene requirements.

Best sellers in this sector include Resucoat™ HB, high build durable floor coatings that are economic to install with long life expectancy, and Resuflor VF, an extremely hard wearing flow applied system, which provides a resilient surface with improved life expectancy.

Pharmaceutical and healthcare

Delivering high standards of environmental safety.

We produce a specialist range of resin based wall and floor systems for this sector, providing worldwide brands with finishes that stand up to tough cleaning regimes which help maintain high levels of biological and environmental safety.

With excellent slip resistance, resin helps meet stringent health and safety requirements and can be colour co-ordinated for safety considerations or made decorative to suit areas which need to make a world class impression.

Best sellers include Resufloor, a self smoothing floor with extremely hardwearing properties, Resustat ESM, an anti-static flooring system and decorative terrazzo systems R.S. Terrazzo and Resustat Terrazzo (with anti-static capabilities).

Retail and commercial

Chance to show off cutting edge designs and durability.

Our floor and wall coatings are used in all areas of the retail and commercial sector. In our experience most retailers want a long lasting solution with slip resistant properties, which can withstand heavy traffic and is easy-to-clean and maintain. Commercial environments and public spaces are increasingly switching to resin flooring solutions rather than traditional carpet and tiles.

Today's commercial office designers are also drawn to the extensive range of decorative products and effects available in a resin floor which can significantly enhance appearance. Decorative finishes and colours are in line with current trends and are often matched with corporate branding.

Stadia and arenas

Scale, safety and durability make resin first choice.

We provide hard wearing resin solutions for large scale arenas and stadia. These unique spaces play host to hundreds of events and thousands of visitors each year and therefore require a special flooring system to meet a demanding brief.

Clients' looking after these high traffic venues want a long lasting flooring solution that is anti-slip, which can withstand heavy footfall and is easy to clean and maintain.

Best sellers in this sector include, Resuflor, a glossy and durable epoxy floor finish which is ideal for concourse areas and locations that take large volumes of footfall. Resupen WB Matt can be applied to enhance the scratch and abrasion resistance. Resucoat HB is a hard wearing epoxy coating which can be applied to a multitude of environments from concourses to concession areas.

Warehousing and storage

Easy installation and maintenance with high durability and chemical resistance.

Warehouse flooring requires finishes which are of the highest standards to meet the day-to-day demands of racking solutions storing heavy items and the movement of heavy machinery including forklifts and conveyor systems. In addition, warehouse flooring is subject to strict health and safety requirements. Depending on the nature of the products being warehoused, hygiene and cleaning regimes should also be considered.

Our comprehensive range of products for warehouse flooring include seamless resin floor and wall coatings suitable for the most demanding areas, which have been used for over 25 years.
